

## BLOCKDOCS USER MANUAL

**Team 16:** Sadir Abdul Hadi, Kristelle Feghali, Alexandru Chiriac

Client

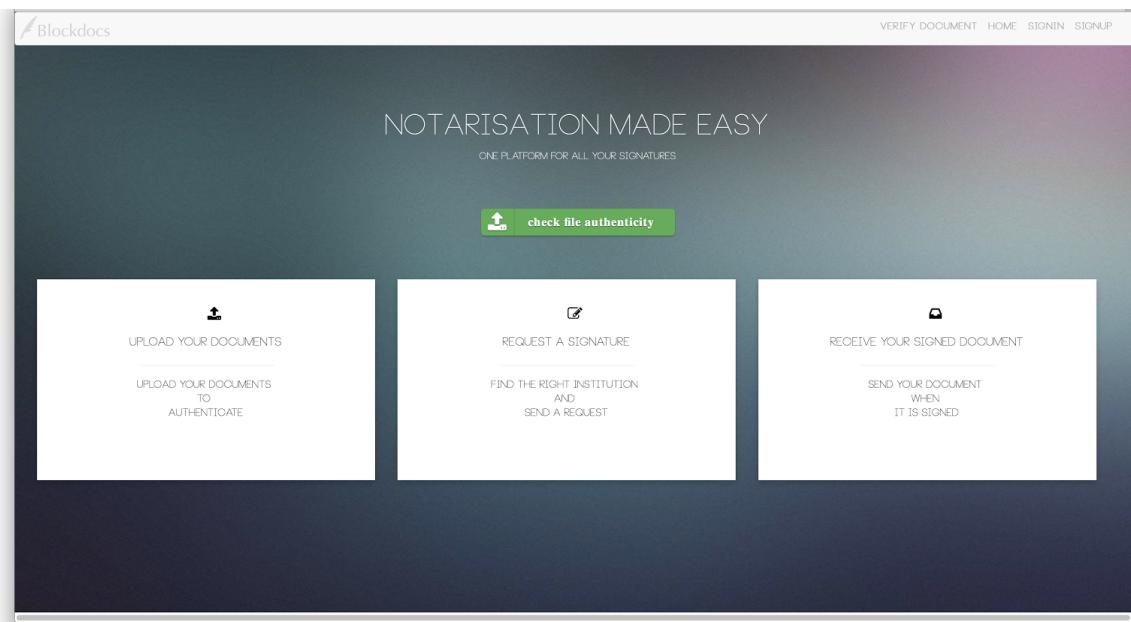

# Overview

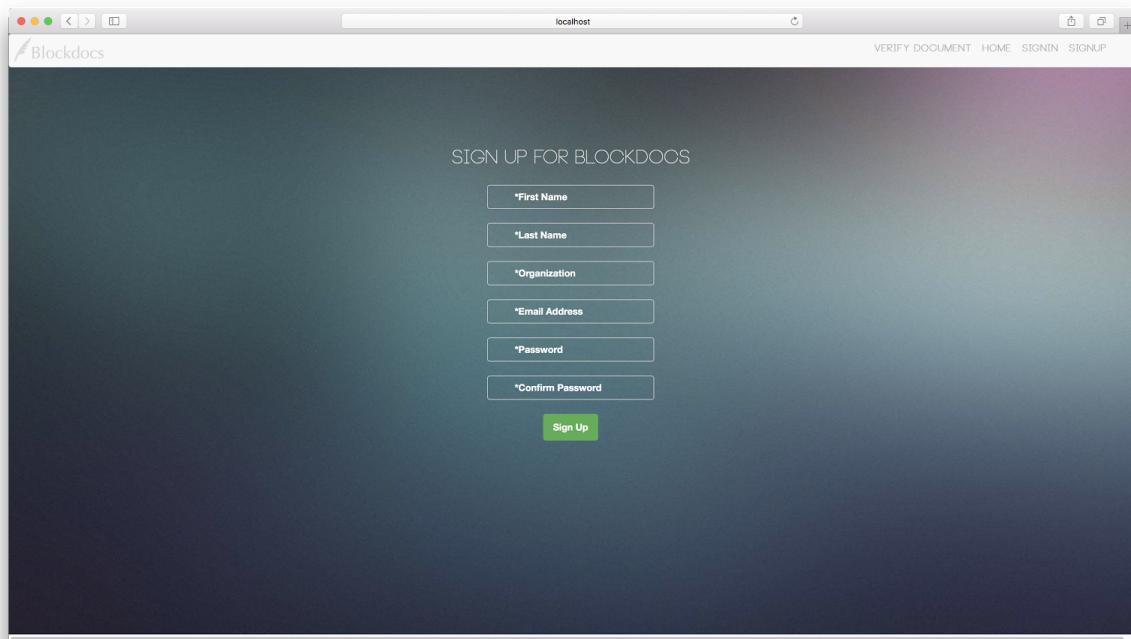

Blockdocs allows users to upload pdf files and request them to be signed by authorised institutions in 3 easy steps. Alternatively, users can also check if a document has been already signed.

## I. Sign up/ Sign in

Upon first accessing our website, users are directed to our home page which explains the main functionalities of our app.

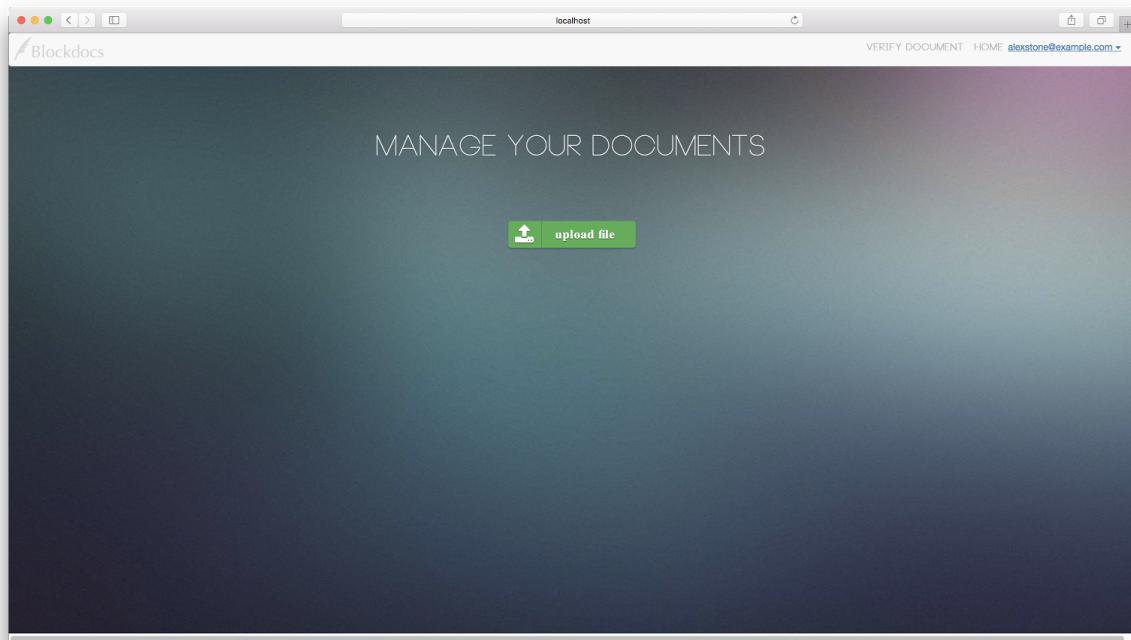

To start using it, users must first create an account by clicking on the signup button on the top right corner.

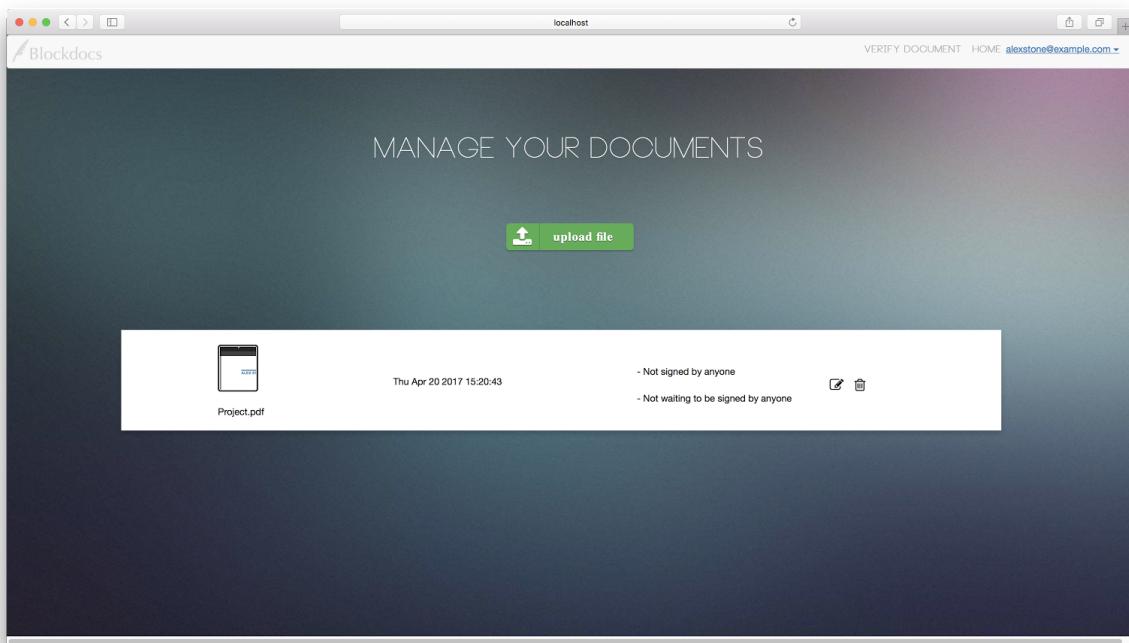

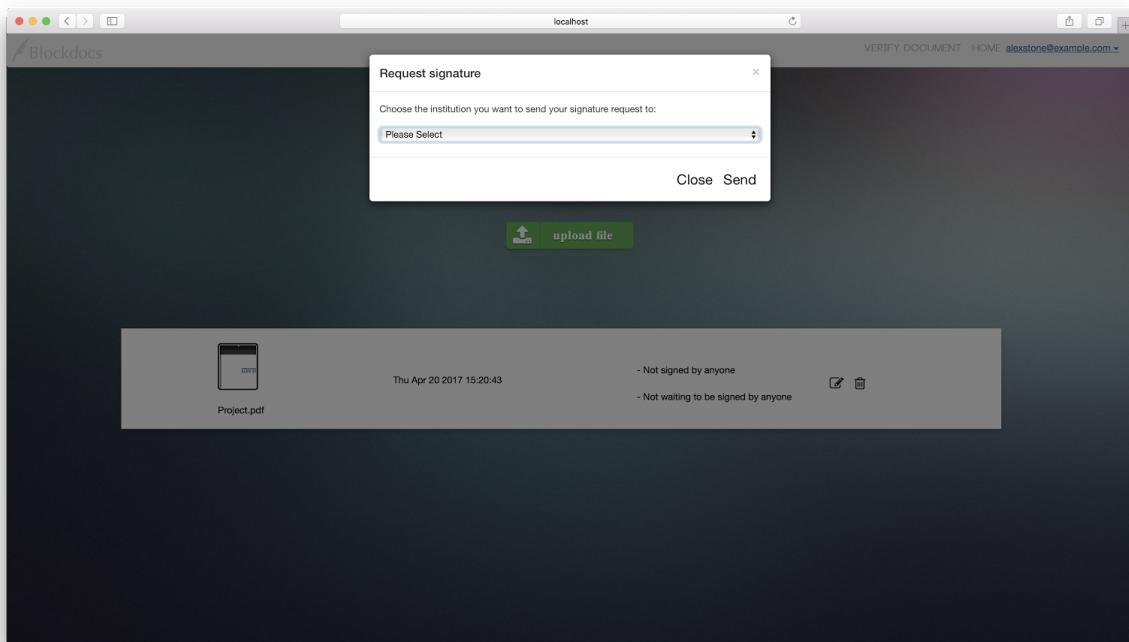

## II. Upload a document

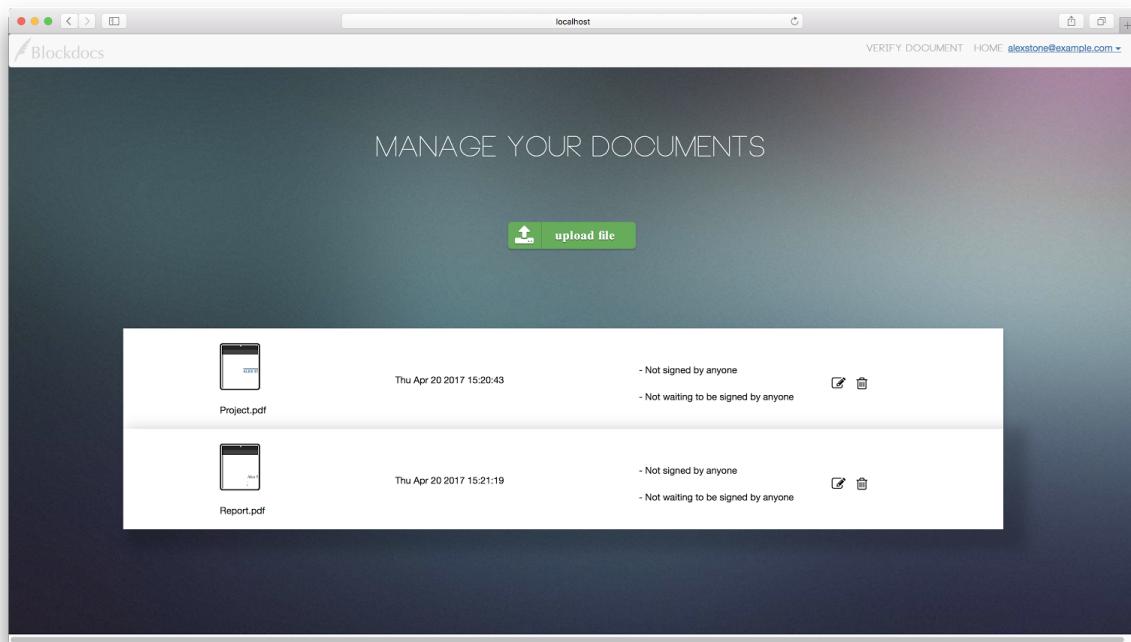

After creating an account, users get redirected to the main portal. Over here, they can now upload a pdf file.

After the file has been selected, user can see their file uploaded on our website, where they can either send it to an institution and request it to be signed or completely delete it from our database.

Users can also choose to upload another document just as they uploaded the first one.

### III. Check for a signed document

Lastly, users can verify if a file has been already signed before by going to the verify document page.
